Hi Amy,

Please see the attached risk assessment document. The document is the same that I sent R6 except for updated risk values for the one facility I remodeled.

Also attached is the memo I sent along with the risk assessment, as well as a referenced excel sheet documenting all of the changes that I made to original 2017 EIS emissions input file.

I'm not sure we would need to include anything else for a 'final' release, however to be thorough I could also include the modeling files?

Please let me know whatever else you need for me at this time to move this along.

Thanks!

-Mike

Subject: Request -- current R6 EtO risk assessment document

Hi Mike,

I'm trying to come up to speed on EtO activities – especially in preparation for providing support to Region 6 for their risk communication activities.

Could you send me the risk assessment document that you send to R6? I just have an earlier draft. Also, did you revise the document after rerunning for the one facility, where the risk numbers decreased?

Your risk assessment document is so thorough that I'm wondering what else would be needed in the way of detail (per R6's request Thursday). Would it be the HEM-4 documentation, modeling files,... (that are Appendices to the RTR risk report)? I know that, whatever it is, Kelly will need to okay it.

Thanks,

Amy
